LEARNING PATHWAYS PROJECT
#FIRSTHACK

Learning Pathways Project, Inc. is pleased to present our second #firsthack event – a hackathon primarily focused on middle school students as its audience. Unlike the run of the mill hackathon, #firsthack is creatively engineered so that each middle school team will be paired with a high-school mentor from Thomas Jefferson High School for Science and Technology. Teams will receive guidance and support from idea conception and design to development and presentation, a strategy intended to help young students learn valuable skills and content while simultaneously developing confidence in a fun and encouraging environment. We hope to see you there!
